Subject: Request for Information-Ramon Oil Field Permitted sump (pit)
Attachments: BLACK TB.pdf; black pit picture.JPG

James,

In response to your request, I have attached a Black Tank Battery map and a photo of the permitted sump (pit). Below is a description of sump history and current use.

This sump (pit) was installed as part of the original construction of the new tank battery in 1986. The purpose of the pit was to catch any liquids from from the heater treater pressure relief valve should it over pressure and have to release. During the time we have been operating the lease, from 1990 to present, the sump (pit) has not been used for any other purpose. The sump (pit) usually contains only a couple of inches of fluid in it.

Please let me know if you need anything else.

Thanks,

Jeff Basenberg, Sec.
